Profile

Experienced Technical Lead and Senior Software Engineer with nearly 20 years of experience designing and delivering enterprise software solutions. Strong background in Java, Spring, cloud-native architectures and distributed systems, with hands-on experience leading teams, driving architecture, and delivering business-critical platforms from concept to production.

Knowledge & Skill Areas:

- Software Architecture & System Design
- Technical Leadership & Mentoring
- Full Software Development Lifecycle
- Requirements Analysis
- Distributed Systems
- Performance Optimization
- UI/UX & Usability
- Agile Delivery

Professional Experience

1. Metro Digital

Feb 2024 – Present

Role: Technical Team Leader

Domains covered:

Retail customer segmentation, pricing systems, real-time digital infrastructure.

Scope:

Development of a centralized Target Group Management System enabling business users to create and manage customer segments based on customer master data and behavioral criteria. The platform serves as the system of record for target groups and customer memberships, exposing them through APIs and events to pricing, marketing, loyalty and other downstream digital services.

Representative projects (grouped):

- Target Group Management System

Key contributions:

- Led the design and end-to-end delivery of TGMS, from architecture and database design to backend, frontend, deployment and production support.
- Designed and implemented scalable REST APIs, event-driven integrations and bulk processing capabilities for multi-tenant environments.
- Led major technology upgrades and platform migrations (Java, Spring Boot), ensuring production stability and backward compatibility.
- Collaborated with business stakeholders to translate requirements into scalable, maintainable technical solutions.

Impact:

- Enabled the successful decommissioning of legacy applications by delivering modern, scalable replacement solutions.

- Improved user productivity by designing intuitive, user-centric interfaces validated through usability testing with business users.
- Reduced data synchronization latency and cloud infrastructure costs through optimized use of ETL and Google Cloud Platform services.
- Strengthened the engineering team's capabilities by mentoring developers, leading technical knowledge sharing, and supporting professional certifications.

Tech stack: Java, Spring Boot 2.x to 3.x to 4.x, Maven, PostgreSQL, Kubernetes, Google Cloud, Terraform, GitHub, Datadog, Angular, Kafka (Message Broker)

2. Evantaj Soft & Crystal Systems

Apr 2022 – Jan 2024 (Crystal Systems |
from Jan 2023 Evantaj)

Role: Technical Team Leader

Domains covered:

Automotive manufacturing, data integration, middleware infrastructure.

Scope:

Development of enterprise-grade middleware responsible for ETL processing between WMS-FLOW'R and legacy systems (GPI, STRATUS, MyPack, GoProd).

Representative projects (grouped):

- Application Middleware / DataLayer for Renault Group

Key contributions:

- Led technical decisions across middleware architecture, deployments and production support;
- Reduced rollback incidents at go-live by introducing cross-check deployment validation and deeper technical reviews;
- Migrated from Spring Boot 2.x to 3.x and Java 8 to 21;
- Improved data transformation throughput and infrastructure performance;

Impact:

- Increased deployment stability and system maintainability.
- Reduced transition times and runtime errors across production flows.
- Delivered solutions that support supply chain integration across global manufacturing plants.

Tech stack: Java, Spring 2.x 3.x, Maven, PostgreSQL, Kubernetes, Google Cloud, Terraform, GitLab, Dynatrace, Angular, Solace (Message Broker)

3. Metro Systems

Mar 2018 – Mar 2022

Role: Technical Team Leader

Domains covered:

Retail customer segmentation, pricing systems, real-time digital infrastructure.

Scope:

Development of platforms to enable customer targeting and 24/7 digital service activation by integrating legacy data sources.

Representative projects (grouped):

- Customer Cache Middleware Platform
- Double Opt-In (email validation)

Key contributions:

- Designed an immutable event storage architecture with abstraction layers for efficient data access and search.
- Improved the performance of the Spark processing module.
- Deployed and maintained the platform across multiple countries with SLA-compliant availability.
- Designed and implemented the end-to-end Double Opt-In workflow, including email validation, token lifecycle management and secure account activation.

Impact:

- Increased performance, scalability, data traceability, and resilience.
- Improved customer data quality by validating email ownership before activation.
- Delivered a scalable and reusable validation workflow adopted across digital customer onboarding processes.

Tech stack: Java, Spring Boot, Apache Cassandra, Apache Spark, PostgreSQL, Kubernetes, Google Cloud, Terraform, GitLab, Liquibase, Datadog, ELK(Elasticsearch, Logstash, Kibana), Apache Kafka

4. SIVCO Romania

Aug 2006 – Feb 2018

Role: Junior Software Developer → Technical Team Leader

Domains covered:

Public administration, education systems, agriculture subsidies, tax systems, national health insurance.

Scope:

Design, development, and modernization of mission-critical public sector platforms used by government institutions.

Representative projects (grouped):

- National e-Learning Platforms
- APIA (Agricultural Subsidy System)
- ANAF (Tax Administration Systems)
- EMIS (Education Management Systems – Romania & Morocco)
- SIUI (Health Insurance System)

Key contributions:

- Led development of critical backend and UI components.
- Introduced automated testing and Liquibase-based database versioning.
- Migrated legacy tech to modern Java/Spring stacks.
- Improved collaboration across analysis, QA, and dev teams.
- Supported nationwide systems serving millions of citizens and public institutions.
- Modernized legacy applications by introducing modern Java technologies and development practices.
- Improved deployment reliability through automated database versioning with Liquibase.

Impact:

- Delivered the national online enrollment platform, supporting annual school admissions across Romania since 2014 (Romanian Ministry of Education – [Primary School Enrolment Portal](#));
- Introduced Liquibase-based database versioning, ensuring consistent and automated schema migrations across all environments.
- Built a reporting platform for the National Office for Prevention and Control of Money Laundering, supporting regulatory reporting and financial crime investigations.

Tech stack: Java, Spring (WebMVC, Security, Rich Client), Hibernate, Oracle, PostgreSQL, Jasper Reports, ExtJS, Maven, JBoss, Apache Tomcat

Technical skills:

- **Programming Languages:** Java, JavaScript, PL/SQL, HTML/CSS, UML
- **Cloud Platforms:** Google Cloud Platform (GCP)
- **Databases (RDBMS & NoSQL):** Oracle (9i/10g/11g), PostgreSQL, Microsoft SQL Server, MySQL, Cassandra
- **Frameworks & Middle Tier Technologies:** Spring Framework (Core, Boot, Security, WebMVC, Batch, AI), Hibernate, JPA, JTA, JDBC, Kubernetes (K8s), Apache Kafka, Solace
- **Development Tools & Platforms:** IntelliJ IDEA, SQL Developer, PgAdmin, Docker, Terraform, Liquibase
- **Build & DevOps:** SonarQube, Maven, Gradle, Jenkins, GitHub Actions
- **Monitoring:** Dynatrace, Datadog
- **Version Control & Issue Tracking:** Git (GitHub, GitLab), JIRA, Confluence
- **Operating Systems:** Mac OS, Windows, Linux Red Hat/Fedora/Ubuntu

Education:

- **University Degree** – Computer Science and Engineering, Polytechnic University of Bucharest, Faculty of Automatic Control and Computers, Bucharest, Romania 2004 – 2009

Certifications:

- [Credly Profile](#)
- **Certified Usability Analyst™ (CUA)**, Human Factors International January 2012
